

## Exercise 3

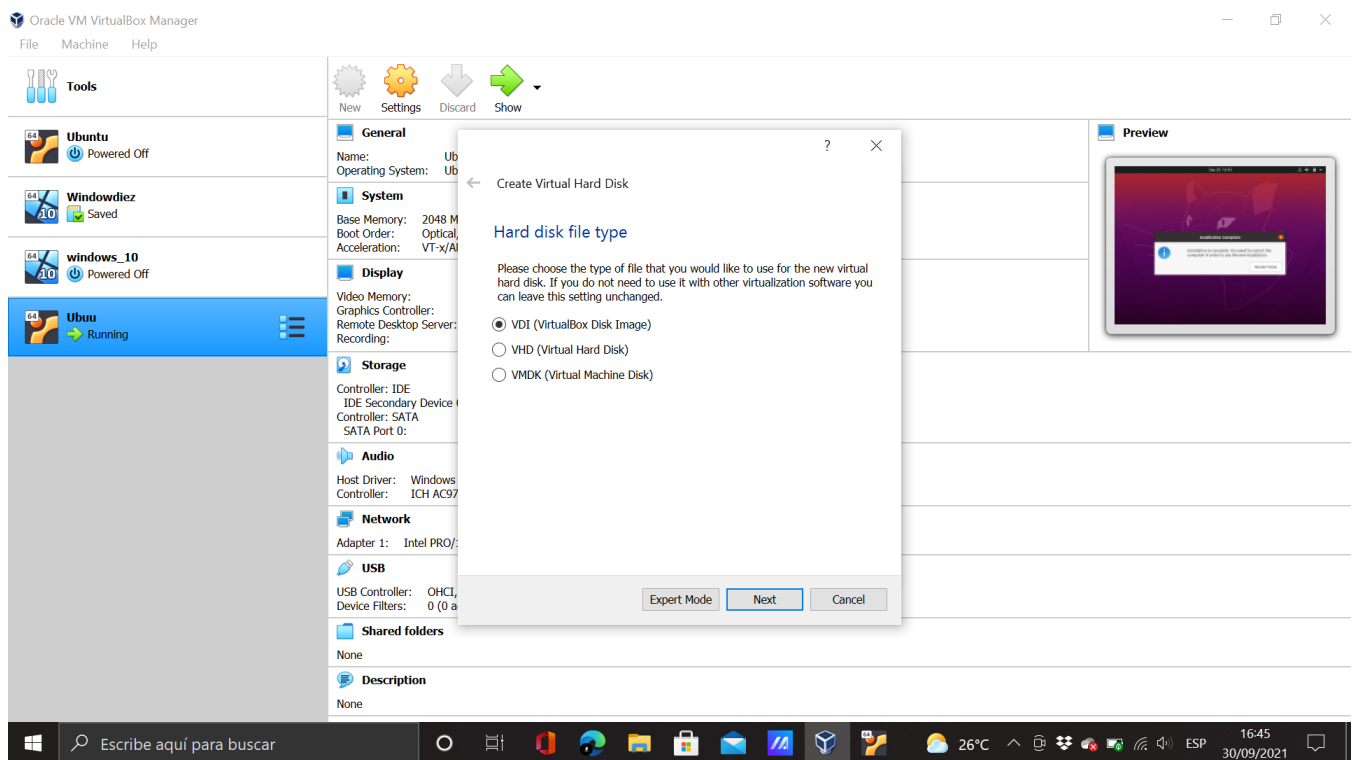

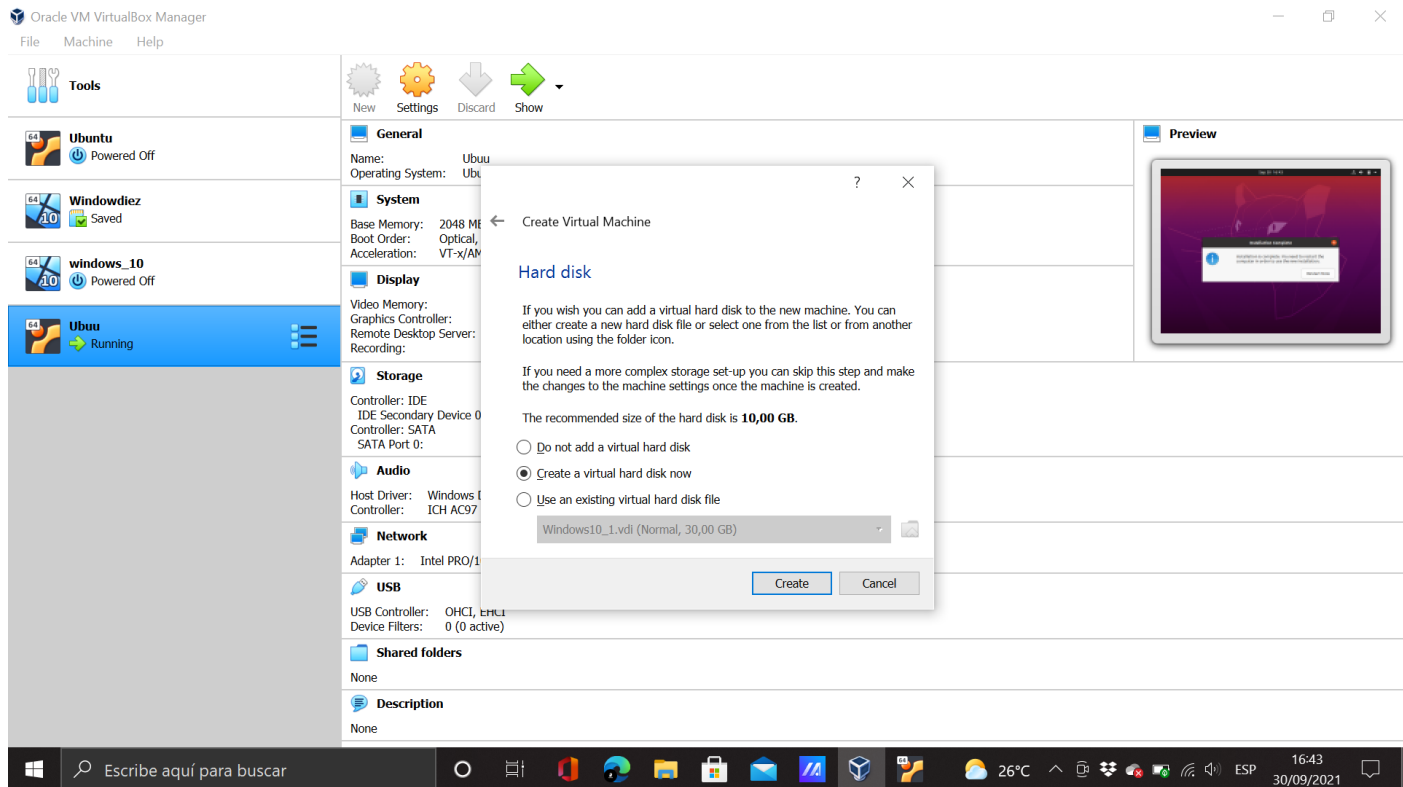

### Step 1: We create a new virtual machine for us Ubuntu's OS

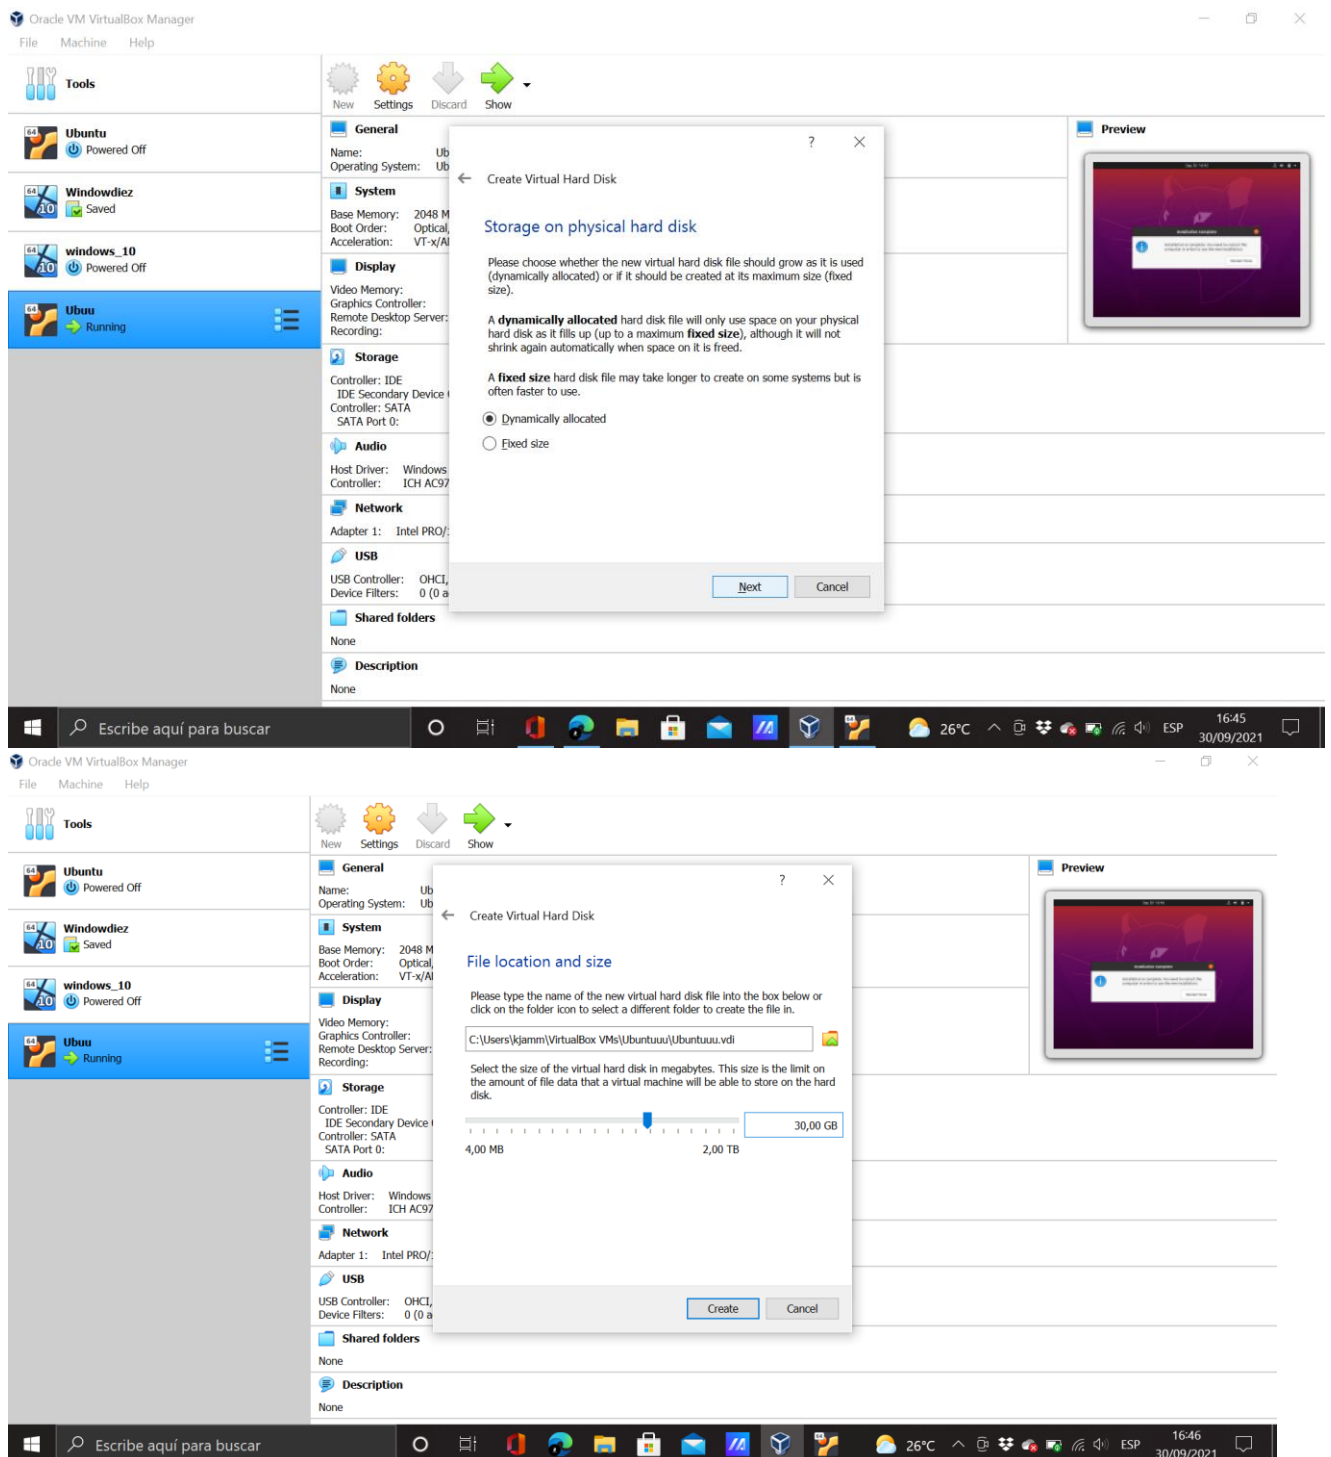

### Step 2: We choose 2GB for this virtual machine

### Step 3: We select just one hard disk 30GB

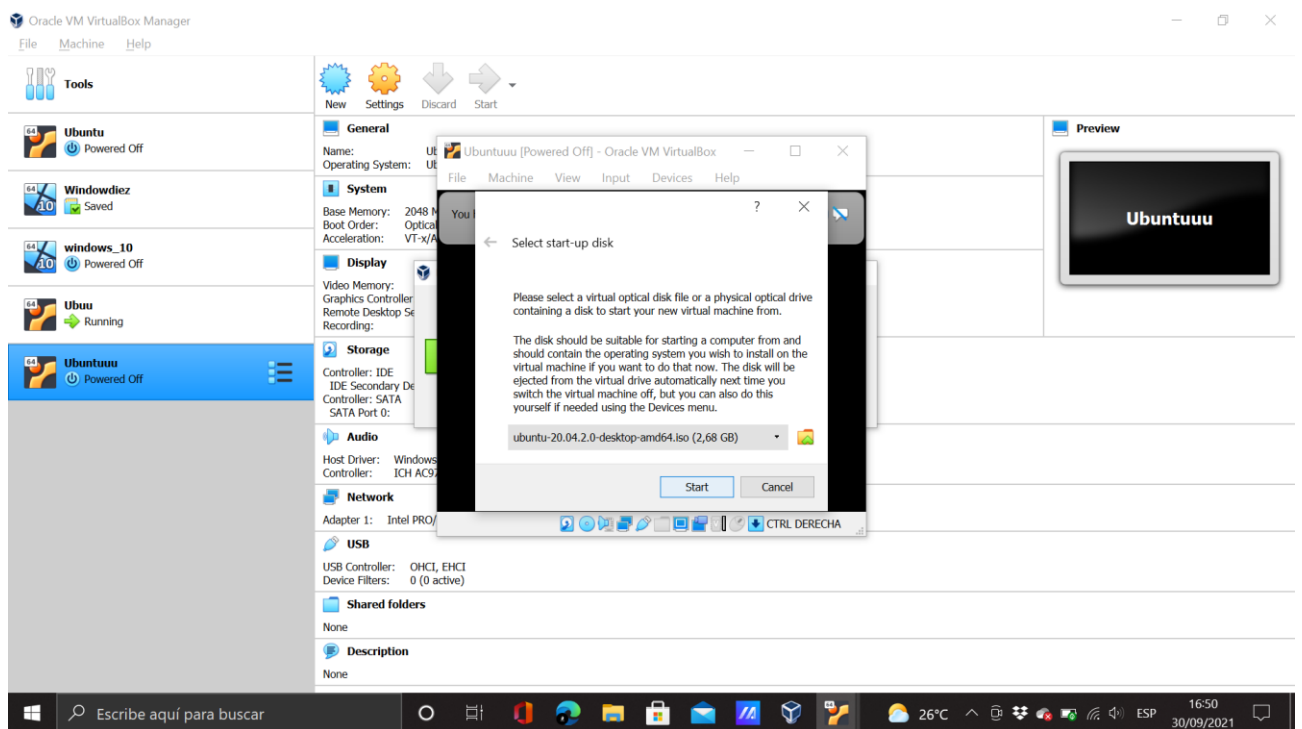

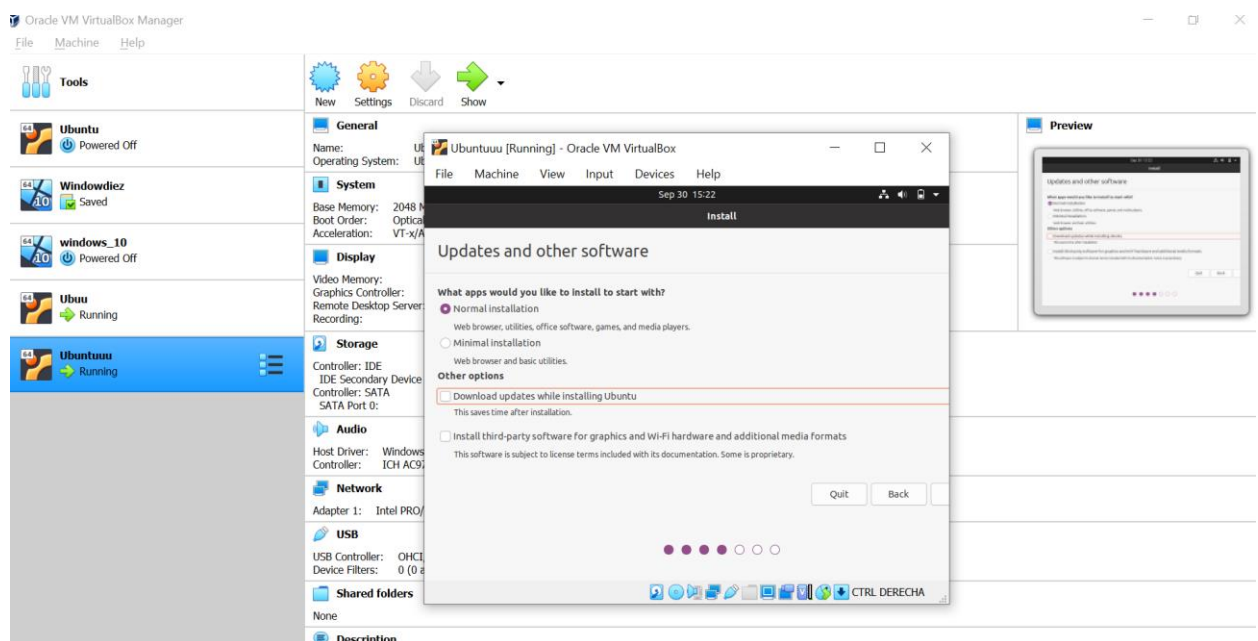

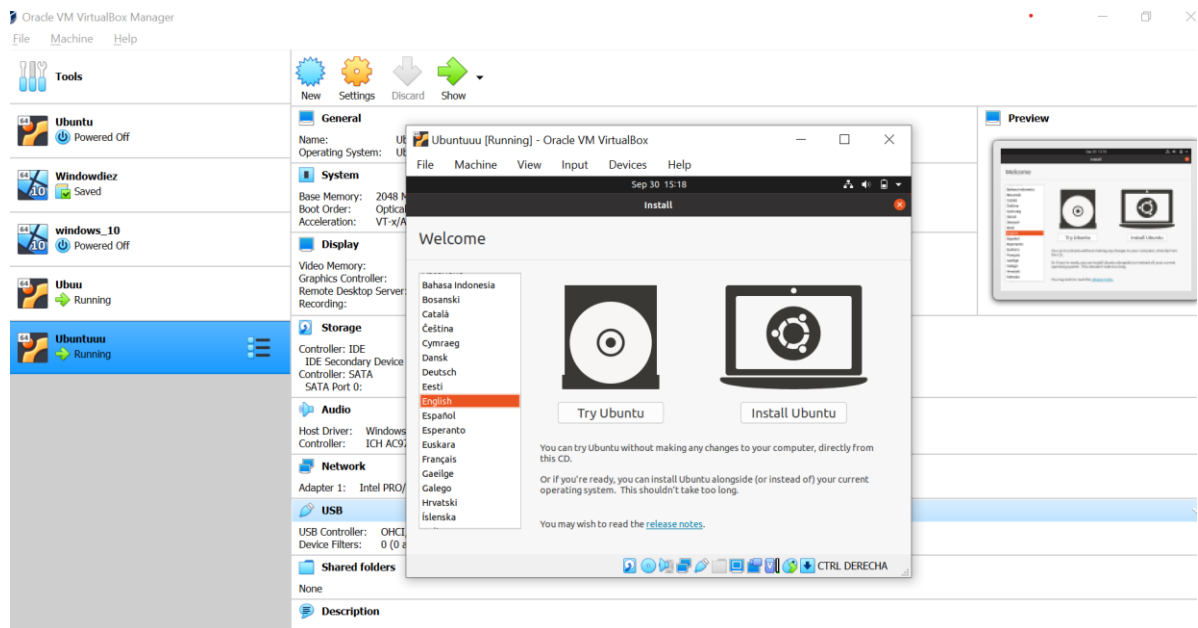

After we create the virtual machine we upload the ISO Ubuntu file. We go to Setting, Storage and add.

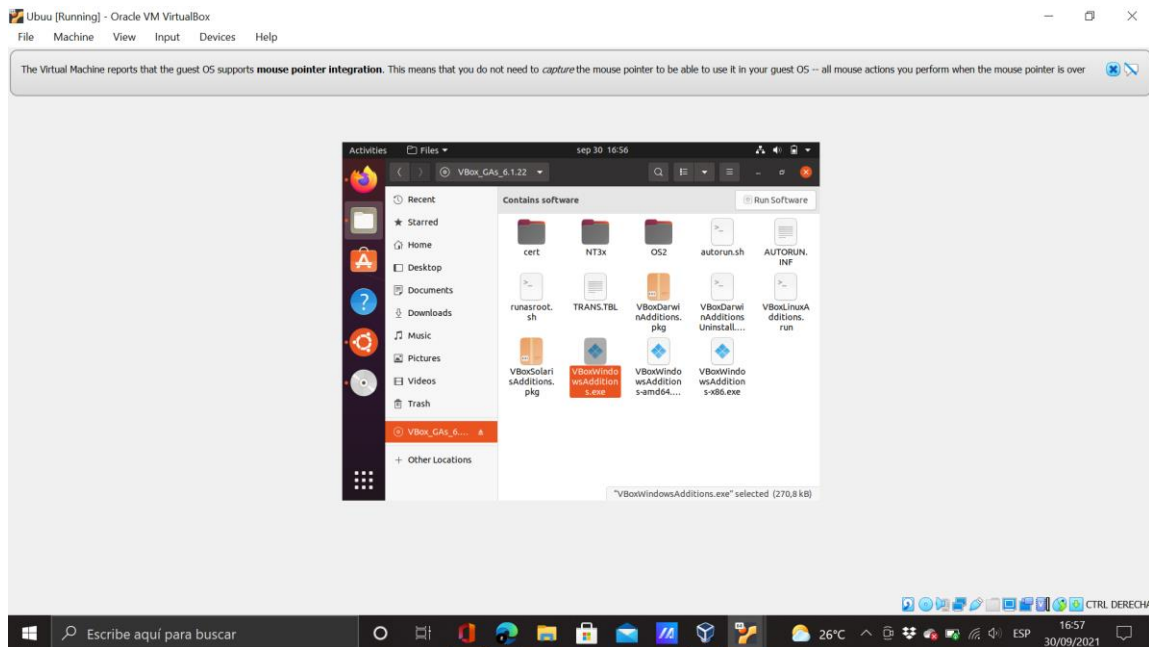

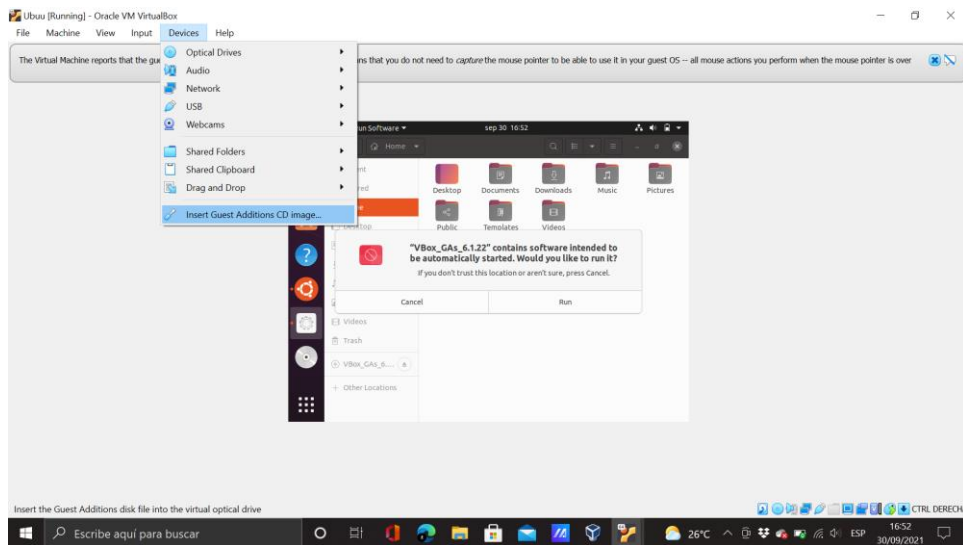

Now we start us virtual machine and select the ISO file to upload

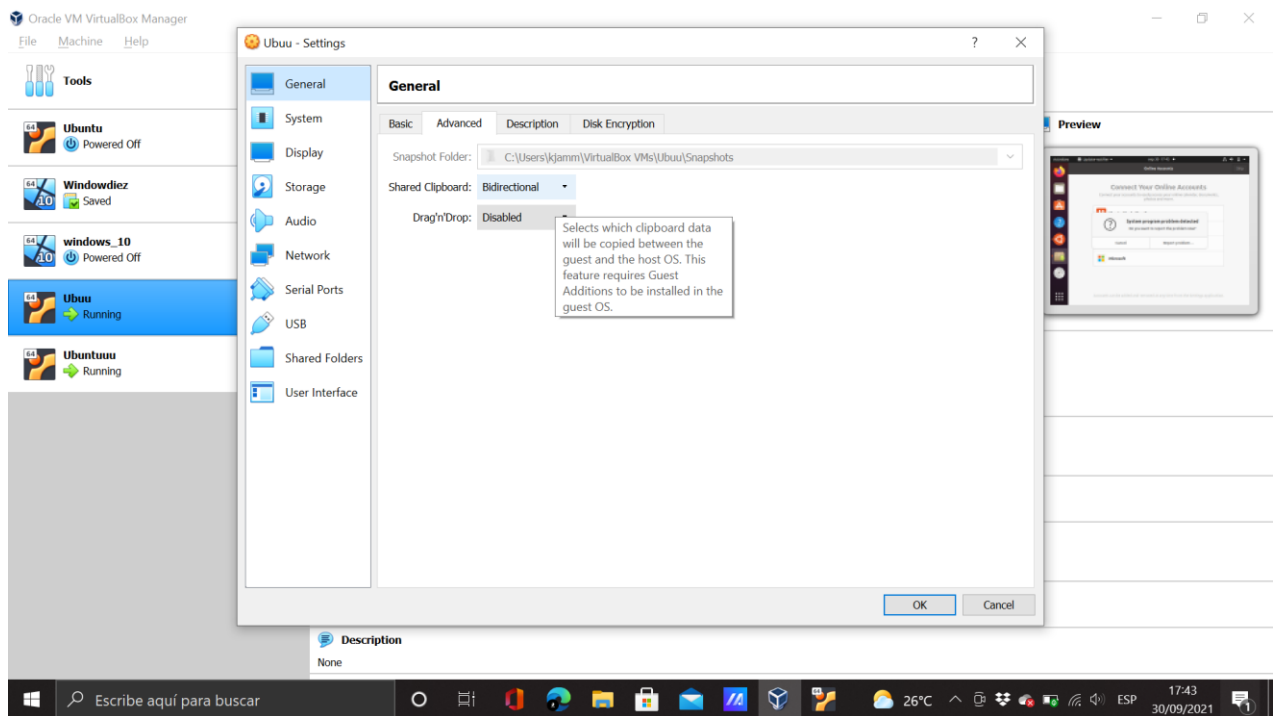

Now Ubuntu is ready to installed it. We use install Ubuntu not the Try Ubuntu option. And we can select normal o minimal the type of installation

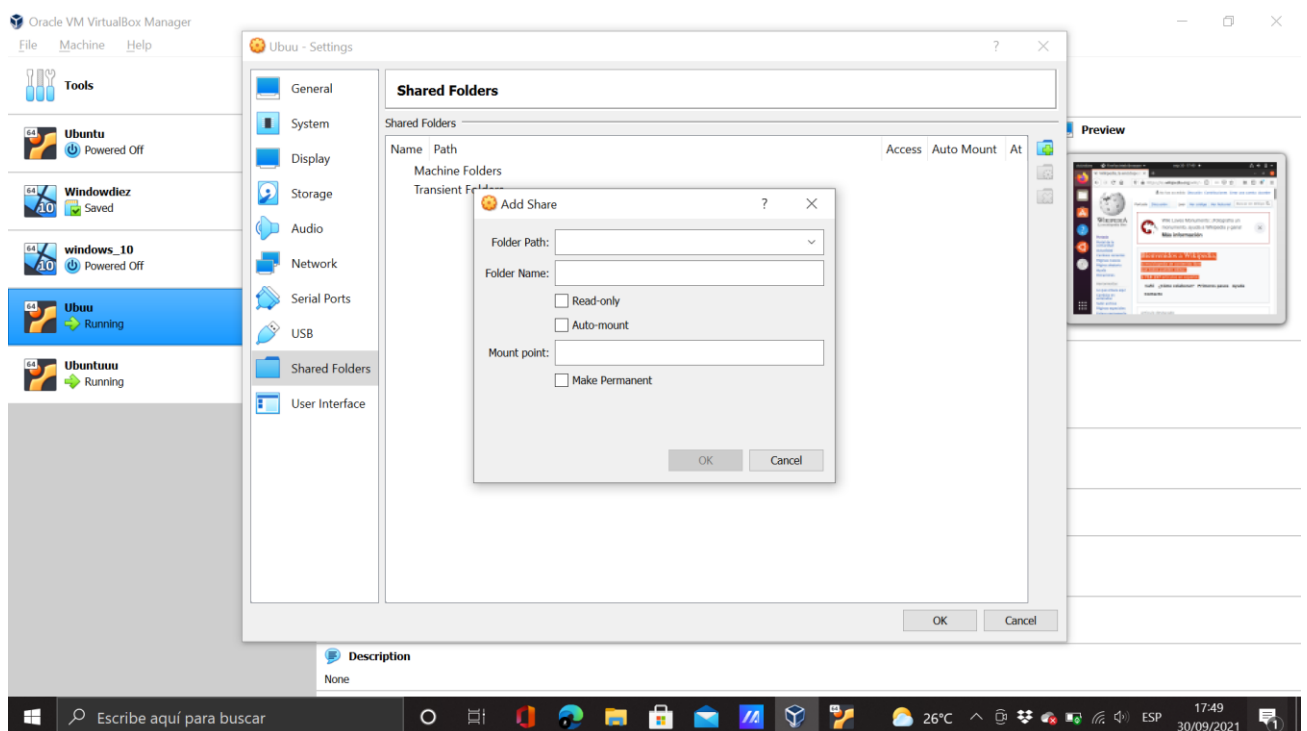

Now we go to Devices and we download the Insert Guest additions. And as we did on Windows, we install it.

After we finish the installation we continue selecting the option to be able to copy and past in a bidirectional way. To do that we shutdown our virtual machine and go to Settings, General, Advanced and we click the bidirectional option.

Also, now we can shared folder. To do that we stay on Settings, Shared folders and we choose the one we want.

Finally if we need to check different options to connect with internet we go to Settings, Network we can select the best option we want it.
